EU ECONOMIC OUTLOOK

In 2019, overall economic activity in the European Union continued its path of steady and moderate growth. The economy expanded by 1.5% last year – the seventh consecutive year of growth – albeit at a more moderate pace. However, the outlook for the remainder of 2020, as well as for 2021, has changed dramatically, as the COVID-19 virus continued to spread and governments were forced to take extreme preventive measures, which have seen large tracts of the economy shut down.

Global demand, supply chains, labour markets, industrial production and international trade have all been heavily impacted. According to the European Commission's latest forecast, EU GDP is set to contract by 7.4% in 2020 before growing by 6.1% in 2021, assuming that the pandemic remains under control and that it's possible to progressively ease the lockdown measures. In addition, the extraordinary monetary and fiscal measures implemented at national and EU levels should help the economy withstand the immediate effects of the crisis.

Sluggish global demand, combined with rising unemployment and limited prospects for wage increases, are likely to bring downward pressure on inflation. Furthermore, the pandemic has severely impacted large parts of the energy sector; with over three billion people worldwide asked to remain at home, demand for oil has collapsed and prices have almost halved. As a result, the European Commission significantly revised its annual estimate for inflation in the EU downwards. Overall inflation (HICP¹) is forecast to fall from 1.4% in 2019 to 0.2% in 2020 and then to increase to 1.1% in 2021 as oil prices bounce back.

After reaching its lowest level in more than a decade in 2019 (6.7%), the EU unemployment rate is set to increase this year, as the COVID-19 pandemic and the subsequent containment measures heavily affect Europe's labour market. However, EU and national policy measures have been implemented to limit job losses during the lockdown period, such as short-time work schemes, wage subsidies for employees and measures to boost liquidity for businesses. Assuming these measures prove effective, the fall in employment this year is likely to be contained: unemployment in the EU is expected to increase to 9% in 2020 and then decrease to 7.9% in 2021.

PASSENGER CARS

REGISTRATIONS

WORLD

The European passenger car market recorded modest growth during 2019 (+0.4%), recovering from a negative performance in the first half of the year. New car sales remained above 18 million units, with a global market share of 24.2%. Demand was supported by strong performances in Ukraine (+17.6%), Kazakhstan and Belarus. The EU (+1.2%) also contributed to the upturn in the region, thanks to solid performances in major Central European markets. In Russia, however, new car sales dropped (-2.7%), while in Turkey an increase in loan interest rates caused a sharp decline (-20.4%) in domestic demand.

New car demand in the United States contracted by 3.2% in 2019 over the previous year. Nevertheless, the country increased its share of the global passenger car market from 17.6% to 18% over the period. As the US accounts for 84% of the region's passenger car sales volume, North America overall mirrored this negative trend, posting a 3.8% year-on-year decline.

In South America, 2019 results were 5.2% lower, as passenger car sales losses in Argentina – where car demand almost halved during the year – were not offset by gains in Brazil (+8.3%).

In 2019, Japanese passenger car sales fell 1.8% compared to 2018, as the impact of the consumption tax increase in October 2019 was not offset by the various supporting schemes aimed at sustaining demand. Sales also declined in South Korea, by 2.0%, to slightly less than 1.5 million units.

Passenger car sales in China decreased by 8.9% during the year to 21.2 million units, continuing a downward trend that started in 2018 following almost three decades of uninterrupted growth. Rising trade tensions with the US and a general economic slowdown undermined consumer confidence. As a result, China's share of global car sales decreased from 29.4% in 2018 to 28.2%, although the country maintained its position as the largest automobile market worldwide.

Last year, the Indian passenger car market collapsed and posted a double-digit drop of 11.3%. This was mainly due to rising ownership costs and the crisis in financial sector that impacted consumer credit.

In 2019 overall, nearly 75 million passenger cars were sold worldwide, 4.9% fewer than the previous year.

THE EUROPEAN UNION

In 2019, new car registrations as a whole increased by 1.2% in the European Union – the sixth consecutive year of growth – reaching more than 15.3 million units. This performance was boosted by December figures of 1,215,076 units, a gain of 21.7%, which marked the highest-ever total for this month to date. This growth mainly resulted from the low base created in December 2018 by the disruptive effect on the market of the introduction of the WLTP test.

Demand was strong in Central European markets, with new car registrations growing by 6.2%. Western European countries posted a mild uplift during 2019 (+0.7%), with Germany (+5.0%) recording the largest increase among the five major EU markets, followed by France (+1.9%) and Italy (+0.3%). However, both Spain (-4.8%) and the United Kingdom (-2.4%) saw demand fall.

The outlook for 2020 appears increasingly bleak, due to the COVID-19 outbreak and the measures implemented to contain it, which will inevitably have a huge impact on EU car sales in the coming months.

Table 3: Top 5 – New passenger car registrations in the EU

PRODUCTION

WORLD

Although European sales were slightly in positive territory in 2019, passenger car production decreased by 4.6% to 18.5 million units, attributable to adverse trade flows and inventory reductions. Outside the EU, in Ukraine (12.5%) the situation improved thanks to strong demand in the final months of the year. However, Turkey and Russia performed worse, down 4.1% and 0.9% respectively.

Car production in the United States in 2019 declined by 7.2% compared to the previous year, as manufacturers wound down for the last months of the year amid weaker demand. With the US accounting for more than 60% of the region's output, North American car production dropped as a result, by 6.2% to 12.2 million units.

South American output was also down in 2019, by 2.8%, owing to weaker-than-expected production in Brazil. Brazil built 2.4 million cars last year, a marginal increase of 1.6%; but production in all other countries declined, with Argentina's volumes almost halved compared to 2018.

Production in China contracted by 9.0%, with 20.7 million cars manufactured in 2019. The drop was mainly the result of stagnating demand and a lack of efficient stimulus policies. Nevertheless, China managed to maintain its position as the world's largest car producer, with a global market share of 28%.

Full-year Japanese car production for 2019 remained virtually unchanged at 8.2 million units, with sluggish domestic sales following the increase to the consumption tax. In South Korea, low export volumes saw a decline in overall car output, at 1.7% lower than 2018.

Manufacturing activity in Thailand and Indonesia slowed sharply during the second half of the year, resulting in 2019 full-year outputs down by 9.7% and 1.1% respectively. India also saw a sharp decline in its passenger car production, with volumes off by 10.4% from 2018, at 3.6 million units.

In Iran, pressure from US economic sanctions contributed to a 42.7% drop in car production last year.

Overall in 2019, global car production fell by 6.3% to 74.1 million passenger cars built.

THE EUROPEAN UNION

EU passenger car production contracted during 2019, owing to softening economic conditions and rising global trade tensions. Full-year output for 2019 reached 15.8 million units, or 5.3% less than the previous year. Despite this, the European Union remains the world's second-largest producer of passenger cars, increasing its global market share from 20.5% in 2018 to 21.3% in 2019.

Western European activity slowed considerably, with four out of five of the largest car-producing countries recording strong declines in 2019: Italy (-19.5%), the United Kingdom (-14.2%), Germany (-9.0%) and France (-5.5%). Only Spain managed to reach positive territory, albeit marginally, by +0.3%.

The Central European markets performed slightly better, with Hungary (+7.6%), Romania (+2.9%) and Slovakia (+0.6%) all recording higher production volumes than in 2018. Polish production recovered in the second half of the year (from -12.7% in the first semester to -3.7%), although it remained in negative territory for the full year.

Table 5: Top 10 – Passenger car producers in the EU

¹² Provisional figures

TRADE

The European Union exported 5 million passenger cars with a value of €124 billion in 2019, down 2.3% on the previous year. Over the same period, the value of car imports substantially increased (+15.6%) to a total of €53 billion.

This strong growth in imports resulted in a 12.5% drop in the trade balance generated by passenger car trade during 2019. Nevertheless, the car industry contributed €71 billion to the EU's trade surplus.

Table 6: EU passenger car trade

SOURCE: EUROSTAT

IMPORTS

EU imports of passenger cars increased strongly both in volume and value terms last year. The key contributors to this growth were the United States (+70.1% value and +33.8% volume), Japan (+18.1% value and +11.9% volume) and South Africa (+14.4% value and +14.0% volume). Japan also accounted for the highest value of passenger cars imported to the European Union, together with the US making up almost half of the total value of EU imports in 2019.

In contrast, import volumes from Turkey and South Korea declined slightly last year.

Table 7: Main countries of origin of EU passenger car imports

SOURCE: EUROSTAT

EXPORTS

In 2019, overall exports of EU-built passengers cars destined for China, Japan and South Korea decreased in both volume and value terms, although the pace of decrease slowed during the second half of the year. Over the same period, the value of EU exports to the United States increased slightly (+1.0%), confirming the US as the EU's most valuable export market for cars.

In terms of volumes, the number of cars shipped from the European Union fell significantly for all six major export destinations. This saw the total number of vehicles exported by the EU fall by 6.9%.

Table 9: Main destinations for EU passenger car exports

COMMERCIAL VEHICLES

REGISTRATIONS

THE EUROPEAN UNION¹³

In 2019, new commercial vehicle (CV) registrations in the EU increased by 2.5% to 2,546,830 units, the seventh consecutive year of growth. Demand was largely driven by the van segment, which made up 83% of CV registrations in the EU.

During the year, each of the five key markets in the region made positive contributions to some extent. Germany delivered the highest percentage gain (+6.1%), followed by France (+4.3%), the UK (+3.0%) and Italy (+1.9%). Spain recorded the poorest performance, with registrations in the country increasing by only 0.3%.

Table 11: New commercial vehicle and bus registrations in the EU | by segment

	2019	2018	% change 19/18
Vans ¹⁴	2,115,650	2,058,574	+2.8%

¹⁵ Commercial vehicles over 3.5t

¹⁶ Buses and coaches over 3.5t

Figure 5: Top 5 – New commercial vehicle and bus registrations in the EU

SOURCE: ACEA

Vans

New light commercial vehicle registrations in the EU reached 2.1 million units in 2019, a 2.8% year-on-year increase. The introduction of the new WLTP emissions test for vans in September 2019 accelerated registrations during the summer months, with a subsequent slowdown from September to November. However, in December this ceased to be a factor, as demand for vans increased again.

The five big EU markets all posted gains during 2019, with Germany (+6.9%) and France (+4.5%) making a significant contribution to the region's growth during the year.

Figure 6: Top 5 – New van registrations in the EU

SOURCE: ACEA

Trucks

The truck segment, covering medium and heavy commercial vehicles over 3.5 tonnes, increased slightly by 0.9% to 388,342 units in 2019. This growth was generated in the first half of the year, as registrations fell for six consecutive months from July. The introduction of obligatory tachographs in heavy trucks from 15 June 2019 resulted in a decline of heavy-truck registrations, which represent the bulk of total truck demand.

The United Kingdom (+9.5%), Germany (+4.2%), France (+1.5%) and Spain (+1.1%) all improved over last year. Italy (-7.6%) was the only key EU market where demand for trucks fell.

Figure 7: Top 5 – New truck registrations in the EU

SOURCE: ACEA

Buses

During 2019, new bus and coach registrations increased by +1.8% in the EU, in spite of the negative performance of the segment during the second half of the year.

The Central European countries provided a strong boost (+5.1%) to the full-year total. Among the major Western European markets, only France (+8.8%) made a positive contribution.

Figure 8: Top 5 – New bus registrations in the EU

SOURCE: ACEA

PRODUCTION

WORLD

Commercial vehicle output on the European continent¹⁷ posted a 3.0% decline in 2019, with 3.5 million units built in total. Declining domestic demand in both Russia and Turkey saw local production fall. Manufacturing activity also slowed in the EU as a result of a weaker economic environment. Looking at the five major EU markets, commercial vehicle production rose only in Spain; production shrank in Germany, France, Italy and the UK last year.

North America's commercial vehicle output expanded by 3.6% in 2019, driven by high production volumes of pickup trucks. In total, some 4.7 million units were manufactured.

The protracted trade dispute between China and the United States, combined with the economic slowdown, undermined consumer confidence and affected vehicle output in China. As a result, Chinese production¹⁸ declined by 1.7% in 2019, with 5.3 million units built.

Commercial vehicle production in Japan and South Korea remained more or less stable at 1.5 million units in 2019, or 0.7% lower than 2018.

Full-year 2019 commercial vehicle production in South America fell sharply (-10.1%). The deteriorating economic situation in Argentina negatively affected Brazilian commercial vehicle production, which is focused on meeting domestic demand and exports throughout Latin America, particularly Argentina.

Following strong 2018 results, production in South Asia saw a sharp slowdown in 2019 (-15.4%) due to weakening demand in Thailand and Indonesia.

Finally, commercial vehicle output in the Middle East and Africa dropped by 6.4% in 2019, as Iranian production declined following the escalation of the US-Iran conflict.

¹⁹ 2019 provisional data

TRADE

Though 2019, the total value of commercial vehicle and bus exports increased significantly (+9.5%), creating a trade surplus of more than €2.5 billion for the European Union.

The truck and bus segments were largely responsible for sustaining this growth, with both imports (+10.6%) and exports (+21.7%) posting double-digit gains compared to 2018. Together, these two vehicle segments alone generated a €4.8 billion trade surplus in 2019.

However, exports of light commercial vehicles declined slightly last year, with van imports outstripping exports by €2.3 billion.

Table 12: EU commercial vehicle and bus trade | by segment

IMPORTS

Turkey maintained its position as the leading country of origin for EU commercial vehicle imports in 2019, despite the value of imports remaining virtually unchanged since the year before.

Throughout 2019, commercial vehicle imports from most of the EU's main trading partners increased substantially in value terms, most notably those from South Africa (+85.2%), China (+57.1%), Switzerland (+34.5%) and Norway (+28.5%).

However, the value of commercial vehicles exported to the EU from the United States and India sharply declined (down by 20.9% and 61.9% respectively) during the same period.

Table 13: Top 10 – Countries of origin of EU commercial vehicle and bus imports

Trade in value (in million €)	2019	2018	% change 19/18	% share 2019
Turkey	5,547	5,528	+0.3	62.9
South Africa	1,471	794	+85.2	16.7
Thailand	583	532	+9.7	6.6
Morocco	233	234	-0.2	2.6
China	169	108	+57.1	1.9
Switzerland	167	124	+34.5	1.9
Macedonia	163	177	-7.7	1.9
Norway	126	98	+28.5	1.4
United States	104	132	-20.9	1.2
India	65	170	-61.9	0.7

EXPORTS

The overall value of EU commercial vehicle exports to Norway (+45.2%), China (+26.5%) and Saudi Arabia (+133.4%) increased significantly in 2019. Norway is now the main export destination for EU-made commercial vehicles and buses, and – together with Switzerland and China – accounted for more than 30% of the total value of EU exports in the sector in 2019.

At the same time, the value of exports to Australia (-32.0%), Turkey (-30.8%) and the United States (-28.0%) contracted strongly last year.

Table 14: Top 10 – Destinations for EU commercial vehicle and bus exports

Trade in value (in million €)	2019	2018	% change 19/18	% share 2019
Norway	1,577	1,086	+45.2	13.9
Switzerland	1,100	1,051	+4.7	9.7
China	747	591	+26.5	6.6
Australia	666	980	-32.0	5.9
Israel	500	450	+11.1	4.4
United States	472	656	-28.0	4.2
Russia	467	426	+9.7	4.1
Saudi Arabia	432	185	+133.4	3.8
Turkey	377	545	-30.8	3.3
Algeria	353	333	+5.8	3.1
